Marquise Technologies to support Image Matters' JPEG2000 boards

Marquise Technologies is supporting the range of JPEG2000 encoding/decoding PCI-Express boards designed by Image Matters, a developer of innovative hardware and software tools for extreme imaging applications.

Geneva, Switzerland – Marquise Technologies announced today the support of Image Matters' product range of JPEG2000 boards for MIST Master, the groundbreaking mastering system.

MIST Master is a turn-key system designed to fulfill very different needs: mastering for digital cinema up to 4K 60p DCI resolution, creating IMF packages, mastering AS-11 or AS-02 HD content for television, or creating JPEG2000 archives.

With the support of Image Matters boards, dedicated options are now accessible like mathematically lossless coding/decoding or ultra-low latency. Combined with the 4K 60 FPS encoding capability of this engine, MIST Master offers true performance and maximize the mastering workflow efficiency.

"JPEG 2000 is becoming a dominant codec in many areas of the industry and combined with new challenges such as HFR and 4K, encoding and decoding can be time-consuming. Image Matters' new product line delivers the speed and quality required to tackle these challenges while keeping the workflows viable." says Laurence Stoll, CEO of Marquise Technologies.

"As Marquise Technologies' innovations increase tremendously production workflow efficiency, at Image Matters, we are proud Marquise has integrated our IM-X family of boards with always in mind the desire to improve image quality", stated Jean-Francois Nivart, Founder of Image Matters.

MIST Master will be demonstrated at NAB 2014.

About Marquise Technologies

Marquise Technologies designs state-of-the-art solutions for the post-production and the television broadcast industry. The company addresses post-production facilities and digital film labs and provides them with high-end solutions for image processing, data conforming, color grading and Digital Cinema & UHDTV mastering. For more information on Marquise Technologies, please visit the website www.marquise-tech.com.

About Image Matters

Image Matters develops innovative high-performance hardware for advanced imaging applications. Leveraging the advantages of JPEG2000 for preserving image quality during post-production and distribution, Image Matters video boards provide accelerated encoding and decoding of multiple broadcast HD streams and of cinema images at 2K and 4K resolution. Compliant with DCI & broadcast profiles, DCP, IMF and SMPTE 2022, Image Matters products offer OEMs, integrators, and video professionals a powerful, cost-effective new route to superior quality in high-end image processing. For more information on Image Matters and its products, go to <http://image.matters.pro/>.
